

OAuth for Facebook

Facebook OAuth

Prerequisites

- Meta Developer Account
- Business-type app created on [Meta Developers](#)

Step 1: App Setup

Add Use Cases

1. Go to your app dashboard
2. Click **"Use Cases"** in left sidebar
3. **Add these use cases:**
 - "Manage everything on your Page" (Facebook Page posting)
 - "Manage messaging & content on Instagram" (Instagram posting)

Customize Facebook Page Use Case

Click "Customize" and add these permissions:

Facebook Page Permissions

Permission	Purpose
<code>business_management</code>	Read/write with Business Manager API
<code>pages_show_list</code>	See which pages you manage
<code>pages_manage_posts</code>	Create and publish posts
<code>pages_manage_engagement</code>	Manage comments
<code>pages_read_engagement</code>	Read page content and followers
<code>pages_read_user_content</code>	Read user-generated content on page
<code>public_profile</code>	Basic profile access

Configure Facebook Login for Business

1. Click "**Facebook Login for Business**" → "Settings"
2. Add Redirect URI:

text

```
https://oauth.pstmn.io/v1/callback
```

3. Set these toggles:
 - Client OAuth Login: **ON**
 - Web OAuth Login: **ON**
 - Enforce HTTPS: **ON**
 - Use Strict Mode for Redirect URIs: **ON**

Step 2: Get Credentials

Go to **App Settings** → **Basic**:

Credential	Location
App ID	Shown at top of Basic Settings
App Secret	Click "Show" button

! Important: save the APP ID and APP Secret

Step 3: Postman OAuth Configuration

1. Open Postman → create a **New Request**
2. Go to **Authorization** tab
3. Set **Auth Type** → **OAuth 2.0**
4. Click "**Configure New Token**"

Field	Value
Grant Type	Authorization Code
Callback URL	<code>https://oauth.pstmn.io/v1/callback</code>
Auth URL	<code>https://www.facebook.com/v21.0/dialog/oauth</code>

Field	Value
Access Token URL	<code>https://graph.facebook.com/v21.0/oauth/access_token</code>
Client ID	<code>your_app_id</code>
Client Secret	<code>your_app_secret</code>
Scope	<code>pages_show_list,pages_manage_posts,pages_read_engagement</code>
Client Authentication	Send client credentials in body

Token Received!

Token Type: Bearer · expires_in: ~60 days. Click "Use Token" to proceed.

⚠ Important: save the access token

Step 4: Get Page Access Token

The User Token alone cannot post to a Page. You need to exchange it for a **Page Access Token**.

Request:

Setting	Value
Method	GET
URL	<code>https://graph.facebook.com/v21.0/me/accounts</code>
Auth	OAuth 2.0 → Facebook Token

```
GET https://graph.facebook.com/v21.0/me/accounts
Authorization: Bearer {user_access_token}
```

Response:

json

```
{
  "data": [
    {
      "access_token": "EAAxxxxxxx",    // Page Token - use this for posting
      "category": "E-commerce website",
      "name": "Your Page Name",
      "id": "123456789",              // Page ID
    }
  ]
}
```

```
"tasks": ["CREATE_CONTENT", "MANAGE"]
  }
]
}
```

💡 Save both the `id` (Page ID) and `access_token` (Page Token). You need both for posting.

Step 5: Post to Facebook Page

Request:

Method	POST
URL	<code>https://graph.facebook.com/v21.0/{PAGE_ID}/feed</code>
Auth	No Auth

```
POST https://graph.facebook.com/v21.0/{page_id}/feed
```

Params (x-www-form-urlencoded or query):

Key	Value
<code>message</code>	Your post text
<code>access_token</code>	Page Access Token

Response:

json

```
{
  "id": "page_id_post_id"
}
```

Facebook Errors & Solutions

Error	Cause	Solution
<code>Invalid Scopes:</code> <code>instagram_business_basic</code>	Using dashboard names in OAuth	Use old names: <code>instagram_basic</code>

Error	Cause	Solution
Only one page returned	Not admin on other pages	Need Admin role (not Editor)
(#10) Not enough permission	Using User Token instead of Page Token	Exchange for Page Token via <code>/me/accounts</code>
Missing required fields (App icon, Privacy Policy)	App not ready for review	Still works for testing
Use Cases not showing "Add Products"	Using new Meta UI	Click "Use Cases" instead

5.Access Token

Short-lived and long-lived tokens

- Short lives token last for about one to two hours
- Long lived tokens last about 60 days
- Default User and Page access tokens are short-lived

[Access Tokens for Meta Technologies | Developer Documentation](#)

this documentation include the process of turning short ived to long lived token
