

OAuth for Tiktok

TikTok OAuth

Prerequisites

- TikTok Developer Account
- App created on [TikTok Developers](#)

Step 1: Create TikTok Developer Account

1. Go to <https://developers.tiktok.com>
2. Click **"Login"** → scan QR code with TikTok app
3. Accept Developer Terms of Service
4. Complete phone/email verification if prompted

Step 2: Create App

1. Click **"Connect an app"** or **"Manage apps"**
2. Click **"Create App"**
3. Fill in:
 - App name
 - App description
 - App icon (upload)
4. **Add Products:**
 - "Login Kit"
 - "Content Posting API"

Step 3: Configure App Settings

Redirect URI

text

For production: <https://yourdomain.com/social/tiktok/callback>
For Postman: <https://oauth.pstmn.io/v1/callback>

Required Scopes

text

```
user.info.basic  
video.upload  
video.publish
```

Step 4: Postman OAuth Configuration

Field	Value
Grant Type	Authorization Code
Callback URL	https://oauth.pstmn.io/v1/callback
Auth URL	https://www.tiktok.com/v2/auth/authorize/
Access Token URL	https://open-api.tiktok.com/oauth/access_token/
Client ID	your_client_key
Client Secret	your_client_secret
Scope	user.info.basic,video.upload,video.publish
Client Authentication	Send as Basic Auth header

Step 5: Get User Info

Request:

http

```
GET https://open-api.tiktok.com/user/info/  
Authorization: Bearer {access_token}
```

Step 6: Upload Video (2-Step Process)

Step 6a: Initialize Upload

Request:

http

```
POST https://open-api.tiktok.com/video/upload/init/  
Authorization: Bearer {access_token}
```

Body:

json

```
{  
  "access_token": "{access_token}",  
  "open_id": "{open_id}"  
}
```

Step 6b: Upload Video File

Request:

http

```
POST https://open-api.tiktok.com/video/upload/  
Authorization: Bearer {access_token}  
Content-Type: multipart/form-data
```

Form data:

Key	Value
video	Video file (MP4, ≤ 20MB for testing)
access_token	Your access token
open_id	User's open_id

Step 7: Publish Video

Request:

http

```
POST https://open-api.tiktok.com/video/publish/  
Authorization: Bearer {access_token}
```

Body:

json

```
{
  "access_token": "{access_token}",
  "open_id": "{open_id}",
  "video_id": "{video_id_from_upload}",
  "title": "Your video title"
}
```

TikTok Important Notes

 **App Review Required:** TikTok requires app review before going live with Content Posting API. Testing works in sandbox mode.

Sandbox Limitations

- Limited to test users added in Developer Portal
- Video upload limited to 20MB
- Posts may not appear publicly

Adding Test Users

1. Go to your app → **"App Management"**
2. Click **"Test Users"**
3. Add TikTok usernames as testers
4. Test users accept invite in TikTok app

TikTok Errors & Solutions

Error	Cause	Solution
<code>invalid_scope</code>	Scope not added to app	Add Login Kit or Content Posting API product
<code>redirect_uri_mismatch</code>	URI not exact	Ensure protocol and trailing slashes match
<code>video upload failed</code>	File too large or wrong format	Use MP4, ≤20MB in sandbox
<code>scope missing</code>	Authorization missing scope	Include all required scopes in initial auth
