

OAuth for instagram

Instagram Graph API

Prerequisites

- Facebook Page
- Instagram Business or Creator account
- Instagram account **linked to Facebook Page**
- Meta Business-type app

Step 1: Add Instagram Tester Role

1. Go to your app → **App roles** → **Roles**
2. Click **"Add People"** → **"Instagram Testers"** tab
3. Enter your Instagram username → Submit
4. Accept invite at: https://www.instagram.com/accounts/manage_access/

Step 2: Configure Instagram Use Case

1. Go to **Use Cases** → **"Manage messaging & content on Instagram"**
2. Click **"API setup with Instagram Login"** (NOT Facebook Login)
3. Click **"Add account"** → log in with Instagram credentials
4. Click **"Generate token"** → **copy & save this token**

Step 3: Get Instagram User ID

Request:

Setting	Value
Method	GET
URL	https://graph.instagram.com/v21.0/me
Params	<code>fields=id,username</code> · <code>access_token=your_token</code>

http

```
GET https://graph.instagram.com/v21.0/me?fields=id,username
&access_token={instagram_token}
```

Response:

json

```
{
  "id": "17841XXXXXXXX",
  "username": "yourhandle"
}
```

Step 4: Create Media Container

Request:

Setting	Value
Method	POST
URL	<code>https://graph.instagram.com/v21.0/{ig-user-id}/media</code>
Params	<code>image_url</code> , <code>caption</code> , <code>access_token</code>

http

```
POST https://graph.instagram.com/v21.0/{ig_user_id}/media
Content-Type: application/json
```

Body:

json

```
{
  "image_url": "https://res.cloudinary.com/.../image.jpg",
  "caption": "Your caption here",
  "access_token": "{instagram_token}"
}
```

Response:

json

```
{
  "id": "18447408238113342"    // container_id
}
```

Image Requirements

Requirement	Value
Format	JPEG only
Aspect Ratio	4:5 to 1.91:1
Min Width	320px
Max Width	1440px
Color Space	sRGB
Hosting	Public, crawler-accessible

✓ Working Image Hosts

- **Cloudinary** (recommended - free tier)
- AWS S3 with public permissions
- Your own server with no robots.txt blocking
- Wikimedia Commons direct .jpg URLs

✗ Blocked Hosts (subcode 33)

- postimg.org / postimages.cc
- picsum.photos
- imgur (often blocked)
- Google Drive
- Localhost

Step 5: Publish Container

Request:

Setting	Value
Method	POST

Setting	Value
URL	<code>https://graph.instagram.com/v21.0/{ig-user-id}/media_publish</code>
Params	<code>creation_id={container_id}</code> · <code>access_token=your_token</code>

http

```
POST https://graph.instagram.com/v21.0/{ig_user_id}/media_publish
Content-Type: application/json
```

Body:

json

```
{
  "creation_id": "{container_id}",
  "access_token": "{instagram_token}"
}
```

Instagram Errors & Solutions

Error	Cause	Solution
<code>error_subcode: 33</code> with empty message	Image host blocked by Meta crawler	Use Cloudinary or whitelisted host
<code>Instagram Business Account not found</code>	Instagram not linked to Page	Link Instagram in Facebook Page Settings
<code>Insufficient developer role</code>	Instagram account not added as tester	Add Instagram Tester in App Roles
<code>API setup with Instagram Login</code> not working	Using wrong setup path	Switch to Instagram Login not Facebook Login
<code>(#100) message field is empty</code>	Image URL invalid or inaccessible	Verify URL returns 200 with .jpg
